LABMENTIX CYBERSECURITY TRAINING PROGRAM

Security Awareness Training Deck

Cybersecurity Help

A cybercrime reporting website for India

Mohammed Eshaan

Batch: 1 September 2026 · Trainer: Ganesh Kuche
Domain: Cybercrime Awareness & Incident Reporting

The Problem

Information is scattered

Reporting routes are spread across several portals and phone numbers.

Hard for many people

Most guidance is in English, and users may not know their crime type.

Time matters

In financial fraud, calling 1930 early improves the chance of stopping the transaction.

“Where do I report this?”

The question this website answers in one tap.

Objectives

1. Organise official reporting information for 20 cybercrime types
2. Build a responsive site with search and filters
3. Add one-tap links to the government portal and tap-to-call for 1930, 112 and 181
4. Offer English, Hindi and Kannada versions
5. Test locally with VS Code and Live Server

Tools Used

Visual Studio Code

Writing and editing the code

Live Server v5.7.10

Local server with live reload

HTML, CSS, JavaScript

Layout, style, search, filters

Edge / Chrome

Viewing and testing

Claude AI assistant

Drafting code and translations, reviewed by me

Official portals

cybercrime.gov.in and cert-in.org.in

How It Works

1. Pick the crime

Search or filter the 20 cybercrime types

2. See the route

Read the recommended action for that crime

3. Tap to act

Open the official portal or call 1930, 112, 181

The site only guides users. It does not collect or store personal information.

Methodology

1. Collect the reporting information
2. Plan structure and features
3. Build layout and styling
4. Add directory, search and filters
5. Add portal links and tap-to-call
6. Add English, Hindi, Kannada
7. Test with Live Server
8. Test tap-to-call on phone

Key Features

Search and filters

Find a crime by name, or filter by money, threats or technical

Tap-to-call

1930, 112 and 181 open the dial pad on a phone

Official links

Portal button on every card, plus a CERT-In link

Three languages

English, Hindi and Kannada, remembered between visits

At a Glance

20
cybercrime types

3
languages

3
helpline numbers

2
official portals

Helplines: 1930 (financial fraud), 112 (police emergency), 181 (women’s helpline)

Results

Finding	Impact
Directory of 20 cybercrime types with their reporting routes	**High**
Helplines 1930, 112 and 181 reachable in one tap	**High**
Direct links to cybercrime.gov.in and CERT-In	**High**
English, Hindi and Kannada interface	**Medium**
Tap-to-call did not open the dial pad from the shared preview	**Medium**

Challenges and Fixes

Live Server disabled in VS Code	→	Trusted the workspace (Manage > Trust)
Browser showed “listing directory”	→	Saved as index.html and opened the project folder
Dial pad did not open on the laptop preview	→	Partly solved: tested on a mobile to check the Call buttons
20 crime types in three languages	→	Reusable action sentences per language

Learning Outcomes

- Building a responsive single-page site with HTML, CSS and JavaScript
- Search, filters and language switching using JavaScript data
- How tel: and external links behave on laptops, phones and previews
- Setting up VS Code with Live Server (workspace trust, index.html)
- Official Indian reporting channels and which crime goes where

Conclusion and Next Steps

Conclusion

- Objectives met: a working, mobile-friendly reporting guide
- Security also means helping victims respond correctly
- Open item: confirm tap-to-call on a hosted address

Future Scope

- Host on Netlify or GitHub Pages
- Add a copy-number fallback
- More languages: Tamil, Bengali, Marathi
- Native-speaker translation review
- State-wise cyber cell contacts

Thank you

Report cybercrime: cybercrime.gov.in · Technical incidents: cert-in.org.in
Financial fraud: 1930 · Police emergency: 112 · Women’s helpline: 181
